DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1, 3-10, drawn to methods of fixing a nucleotide derivative to a solid carrier using a transferase to produce a covalent bond, classified in class 435, subclass 174.
 - II. Claim 11, drawn to a solid carrier, classified in class 435, subclass 287.2.
 - III. Claim 12, drawn to a process of hybridization of complementary nucleic acid fragments to a solid carrier, classified in class 435, subclass 6.
2. The inventions are distinct, each from the other because of the following reasons:
 - A) Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the solid carrier of Claim 11 may be made by alternative methods to result in a solid support with nucleic acids covalently attached such as methods of spotting and chemical reactions between functional groups which do not require an enzyme.
 - B) Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1)

Art Unit: 1634

the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the solid carrier of Group II may be used in a materially different method such as methods of amplification, detection, expression analysis, or alternative screening assays.

C) The inventions of Group I and III are patentably distinct methods because they each have different objectives, different uses, different reagents and different method steps. The method of Group I is for making an array by covalently attaching nucleotide derivatives to a solid support using a transferase. Alternatively, the method of Group III is for hybridizing complementary nucleic acids to an array. Therefore the methods are distinct over one another.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by the different classifications and their divergent subject matter, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

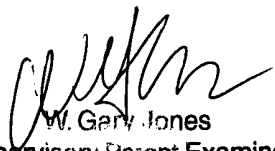

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to examiner Jeanine Goldberg whose telephone number is (703) 306-5817. The examiner can normally be reached Monday-Friday from 8:00 a.m. to 5:30 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Jones, can be reached on (703) 308-1152. The fax number for this Group is (703) 305-3014.

Any inquiry of formal matters can be directed to the patent analyst, Pauline Farrier, whose telephone number is (703) 305-3550.

Any inquiry of a general nature should be directed to the Group receptionist whose telephone number is (703) 308-0196.
